CONTENTS

Volume 52, Issue Nos. 1–12 (2006)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 10 September

A filtering technique for system of reaction–diffusion equations: F. Dupros, M. Garbey and W. E. Fitzgibbon 1

Stability of high-speed two-layer film casting of Newtonian fluids: J. Zhang, R. E. Khayat and W. Wang 31

Continuous, discontinuous and coupled discontinuous–continuous Galerkin finite element methods for the shallow water equations: C. Dawson, J. J. Westerink, J. C. Feyen and D. Pothina 63

On the efficiency and quality of numerical solutions in CFD problems using the interface strip preconditioner for domain decomposition methods: R. R. Paz, N. M. Nigro and M. A. Storti 89

Issue No. 2, 20 September

k-Version of finite element method in 2-D polymer flows: Oldroyd-B constitutive model: K. S. Surana, A. Mohammed, J. N. Reddy and P. W. TenPas 119

Analytic study of 2D and 3D grid motion using modified Laplacian: C. Burg 163

Simulation of an impinging jet in a crossflow using a Reynolds stress transport model: N. A. Worth and Z. Yang 199

Solving a fully nonlinear highly dispersive Boussinesq model with mesh-less least square-based finite difference method: B. Wang and H. Liu 213

Issue No. 3, 30 September

A particle finite element method applied to long wave run-up: J. Birknes and G. Pedersen 237

Finite volume method with zonal-embedded grids for cylindrical coordinates: Y. K. Suh and C. H. Yeo 263

A finite volume method for viscous incompressible flows using a consistent flux reconstruction scheme: A. Roy and G. Bandyopadhyay 297

Evolutionary optimization techniques as versatile solvers for hard-to-converge problems in computational fluid dynamics: R. I. Bourisli and D. A. Kaminski 321

Issue No. 4, 10 October

LES of the compressed Taylor vortex flow using a finite volume/finite element method on unstructured grids: C. Le Ribault, L. Le Penven and M. Buffat 355

Sensitivity computations of eddy viscosity models with an application in drag computation: F. Pahlevani 381

A 3D second-order accurate projection-based Finite Volume code on non-staggered, non-uniform structured grids with continuity preserving properties: application to buoyancy-driven flows: F. M. Denaro 393

Riemann solvers with evolved initial conditions: E. F. Toro 433

Adaptive mesh refinement techniques for high-order shock capturing schemes for multi-dimensional hydrodynamic simulations: A. Baeza and P. Mulet 455

Issue No. 5, 20 October

Simulation of shallow flows over variable topographies using unstructured grids: A. Mohammadian and D. Y. Le Roux 473

CFD-based multi-objective optimization method for ship design: Y. Tahara, S. Tohyama and T. Katsui 499

Study of a plane-free jet exhausting from a channel by vortex-in-cell method: M. A. Knani, H.-C. Boisson, A. Giovannini and T. Lili 529

Adaptive mesh refinement for high-resolution finite element schemes: M. Möller and D. Kuzmin 545

Runge–Kutta time-stepping schemes with TVD central differencing for the water hammer equations: E. M. Wahba 571

Issue No. 6, 30 October

Discretization and parallel performance of an unstructured finite volume Navier–Stokes solver: S. A. Mohsen Karimian and A. G. Straatman 591

A fully 3D finite volume method for incompressible Navier–Stokes equations: A. Deponti, V. Pennati and L. D. Biase 617

A numerical method for simulation of attached cavitation flows: L. Liu, J. Li and Z. Feng 639

Scaled boundary finite element analysis of the water sloshing in 2D containers: B. Teng, M. Zhao and G. H. He 659

The multi-stage centred-scheme approach applied to a drift-flux two-phase flow model: S. T. Munkejord, S. Evje and T. Flåtten 679

Issue No. 7, 10 November

Continuation of travelling-wave solutions of the Navier–Stokes equations: I. Mercader, O. Batiste and A. Alonso 707

An efficient second-order accurate cut-cell method for solving the variable coefficient Poisson equation with jump conditions on irregular domains: H. Ji, F.-S. Lien and E. Yee 723

Wavelet-based adaptive multiresolution computation of viscous reactive flows: Y. A. Rastigejev and S. Paolucci 749

Numerical study of flow and thermal behaviour of lid-driven flows in cavities of small aspect ratios: C.-L. Chen and C.-H. Cheng 785

Numerical simulation of unconfined flow past a triangular cylinder: A. K. De and A. Dalal 801

Issue No. 8, 20 November

Automatic CAD model topology generation: P. S. Patel, D. L. Marcum and M. G. Remotigue 823

Theoretical analysis for achieving high-order spatial accuracy in Lagrangian/Eulerian source terms: D. P. Schmidt 843

A compact finite difference method on staggered grid for Navier–Stokes flows: K. K. Q. Zhang, B. Shotorban, W. J. Minkowycz and F. Mashayek 867

Unsteady RANS simulation of oscillating mould flows: R. Schwarze 883

An adaptive discretization of shallow-water equations based on discontinuous Galerkin methods: J.-F. Remacle, S. S. Frazão, X. Li and M. S. Shephard 903

Viscous flow computations of aircraft with changing control surface deflection using unstructured dynamic meshes: M. Murayama, Y. Ito, K. Nakahashi, K. Matsushima and T. Iwamiya 925

Issue No. 9, 30 November

Comparison of GMRES and ORTHOMIN for the black oil model on unstructured grids: W. Li, Z. Chen, G. Huan and X. Sun 941

Numerical approximation of the heat transfer between domains separated by thin walls: R. Codina and G. Houzeaux 963

Numerical analysis of mixed convection in three-dimensional rectangular channel with flush-mounted heat sources based on field synergy principle: Y. P. Cheng, T. S. Lee and H. T. Low 987

A fractional two-step implicit algorithm using curvilinear collected grids: J. Ye, J. A. McCorquodale and J. Peng 1005

Flood control of urban stormwater conduit systems using the finite element method: T. Kurahashi and M. Kawahara 1029

Issue No. 10, 10 December

A conservative 2D model of inundation flow with solute transport over dry bed: J. Murillo, P. García-Navarro, J. Burguete and P. Brufau 1059

A PLIC volume tracking method for the simulation of two-fluid flows: S. H. Garrioch and B. R. Baliga 1093

An explicit algebraic Reynolds stress model in turbulence: M. M. Rahman and T. Siikonen 1135

Application of the TVD scheme to the nonlinear instability analysis of a capillary jet: S. G. Chuech and M.-M. Yan 1159

Issue No. 11, 20 December

High-order stable interpolations for immersed boundary methods: N. Peller, A. Le Duc, F. Tremblay and M. Manhart 1175

A new modification of the immersed-boundary method for simulating flows with complex moving boundaries: J. Deng, X.-M. Shao and A.-L. Ren 1195

Finite volume adaptive solutions using SIMPLE as smoother: A. Syrakos and A. Goulas 1215

Study of techniques for obtaining continuous models from 2D discrete reduced-order state-space CFD models: A. L. Gaitonde and D. P. Jones 1247

Modelling of wind wave-induced bottom processes during the slack water periods in Tampa Bay, Florida: J. Z. Shi, M. E. Luther and S. Meyers 1277

Issue No. 12, 30 December

Development of a class of multiple time-stepping schemes for convection–diffusion equations in two dimensions: R. K. Lin and T. W. H. Sheu 1293

High-order compact numerical schemes for non-hydrostatic free surface flows: S. L. Anthonio and K. R. Hall 1315

Karhunen–Loeve representations of turbulent channel flows using the method of snapshots: R. A. Handler, K. D. Housiadas and A. N. Beris 1339

Study of linear response identification techniques and reduced-order model generation for a 2D CFD scheme: A. L. Gaitonde and D. P. Jones 1361
